

# All-in-One Wireless Network Solution

## The Smart Choice for Underground Comms

- Communications, tracking and data in one system
- Expandable to grow with you: voice only, tracking only, or voice, tracking and data
- The clearest voice for maximum productivity and safety
- Low maintenance costs
- All line-powered, all battery-powered or a mixture of both to provide the right solution
- Mesh Nodes act as repeaters and wirelessly communicate with each other
- Battery-powered mesh nodes (mobile) move with the mining process to provide continuous comms in the working area - wirelessly
- 900 MHz enables 3,000 feet or more between nodes for less infrastructure
- Real-time, continuous tracking of assets and personnel
- Atmospheric and other sensors communicate wirelessly to the network
